for engineers

REDPITAYA

REPLACE YOUR LAB INSTRUMENTS

One open-source platform that will replace bulky and expensive instruments?
Meet Red Pitaya, and step on this revolutionary road!

vs.

And many more!

THE RED PITAYA ECOSYSTEM

HARDWARE

flexible sample
rate, resolution

flexible number
of channels

cost optimized
variants

easy to integrate
as OEM

SOFTWARE

open-source

C APIs, Python,
LabVIEW, MATLAB

WEB UI

community
projects &
applications

INSTRUMENTS

oscilloscope

spectrum analyzer

signal generator

lock-in amplifiers

PID controller

sweep generators

digital mixers

tunable
bandpass filters

Applications for your RED PITAYA

All the applications are web-based, FREE of charge and available when purchasing a board.

Oscilloscope & Signal generator

LCR meter

Logic analyzer

Spectrum analyzer

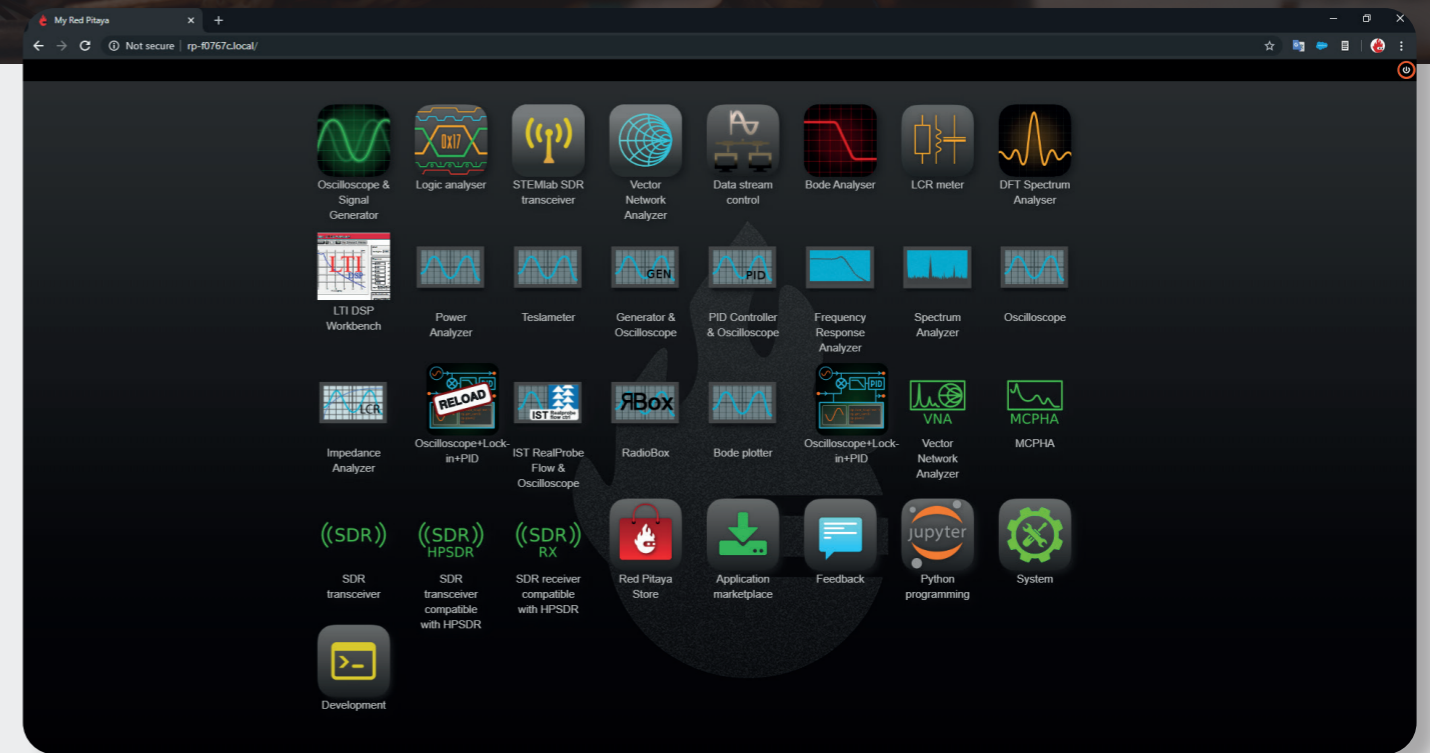

Bode analyzer

Vector network analyzer

An intuitive USER INTERFACE

Red Pitaya uses a web interface and all the software is running on the board, there's no need to install any proprietary software to get started. All you have to do is open your web browser, connect to the board and select which application you want to run.

WORKS WITH

Remote control

Your Red Pitaya board can be controlled remotely over LAN or wireless.

Python

Control your Red Pitaya with Python – the most popular script language used by researchers working on the fast development of any engineering application that requires testing, measurement, control & signal processing

MATLAB

Control your Red Pitaya with MATLAB – the easiest and most productive software environment for engineers and scientists. The perfect combination to speed up your research, prototyping and testing.

LabVIEW

Control your Red Pitaya with LabVIEW – software designed for the fast development of any engineering application that requires testing, measurement, or control.

Programming

For those who would like to program their own applications, we have provided C and Python APIs that enable super easy access to all Red Pitaya features, while more advanced users can also create and run their own FPGA logic.

Jupyter Notebook / Python

Jupyter Notebook enables you to execute Python code and control Red Pitaya hardware features, visualize data and add explanatory text or write interactive documents directly in a web browser Jupyter Notebook Python editor.

C API

A list of built-in C code functions (APIs) provides full control over the Red Pitaya board (signal generation & acquisition, digital I/O control, communication: I2C, SPI, UART, and others).

FPGA

Examples of Red Pitaya FPGA code include complete control logic over signal acquisition, generation and more, along with all image build instructions and register map documentation. The code is free & available on Github.

Explore OUR PRODUCTS

STEMlab 125-14

STEMlab 125-14 is our most versatile and popular product, providing perfect value for money.

More variants available:

Zynq 7020 Low Noise External Clock

ISO17025 Low Noise OEM

STEMlab 125-14 X-Channel System

STEMlab 125-14 X-Channel System was designed for applications that require multi-channel RF signal acquisition and generation.

SIGNAllab 250-12

SIGNAllab 250-12 is the most sophisticated Red Pitaya product, built for more demanding industrial applications and research.

OEM

SDRlab 122-16

SDRlab 122-16 was developed specifically for software-defined radio and more demanding RF applications.

External Clock

INPUTS?

NEED MORE

STEMlab 125-14 4-Input

Key features:

- Four inputs at 125 Msps 14-bit
- Internal/external clock selector available
- Performance improvements (less noise & crosstalk)
- FPGA AMD Xilinx Zynq 7020 SoC

Love your Red Pitaya, BUT IT DOESN'T QUITE MEET YOUR NEEDS?

We can offer tailored solutions in hardware and software design, rapid prototyping, and product development to meet our clients' specific needs. Our record of success can be seen in collaborations with:

+ many more!

Expand your Red Pitaya IN +1,500 WAYS!

Main Features

- Two mikroBUS™ sockets allow interfacing with more than 1,500 MIKROE Click boards™.
- High-performance clock and trigger synchronization between multiple Red Pitaya units or other external clock devices using U.FL patch cables.
- Powering Red Pitaya through an external power supply (12-24 V or via USB-C connector).

1500+ Click boards™

2 mikroBUS™ sockets

// **CLICK THE LINK**

What are Click boards™?

Click boards™ by MIKROE are small add-on boards designed to simplify the process of developing electronic projects, by providing a pre-built and tested module with specific functionality, including:

- communication,
- display,
- sensors,
- storage,
- motor control,
- mixed signals, and others.

Red Pitaya for **PROTOTYPING, DEVELOPING & TESTING**

Red Pitaya is leading a revolution in the electronics industry, pioneering the move from closed, fixed-functionality instruments to multifunctional, open-source software-defined instruments that can satisfy a broad spectrum of customers in different market segments.

NASA

Prototyping Ground-Penetrating Radar for the Mars Science Helicopter

NASA's upcoming helicopter mission to Mars will feature an advanced ultra-wideband, frequency-modulated, continuous-wave ground-penetrating radar system. This cutting-edge radar technology was prototyped utilizing the innovative capabilities of the Red Pitaya SDRIab.

Silicon Microgravity (SMG)

Red Pitaya used for development and testing of MEMS

The UK company Silicon Microgravity (SMG) is a designer and producer of advanced sensors and accelerometers with proprietary MEMS resonant technology. SMG runs a wide range of tests for its MEMS in different setups, where reprogrammable units are a major requirement to eliminate the need for re-designing or creating additional custom hardware.

Red Pitaya as an **OEM**

Utilizing Red Pitaya as an OEM has numerous advantages across various industries. Its open-source platform offers a multitude of benefits, including the ability to run custom code, a compact form factor, and affordability.

Red Pitaya device used as an OEM module in an optical frequency reference system

In this project, the Red Pitaya serves as an OEM module within the optical frequency reference system. The Red Pitaya's adaptability and robust features make it an integral component in ensuring precise control and monitoring capabilities within the system.

LongPath Technologies

Laser monitoring of methane emissions with Red Pitaya

LongPath Technologies uses a Red Pitaya STEMLab as a main fast feedback controller for frequency comb lasers. These Nobel Prize-winning, long-range laser networks provide the lowest cost detection and quantification of specific emission sources across large areas.

A Full-Stack Teaching Platform for the ECE Curriculum: **FROM CLASSROOM TO CAREER**

Red Pitaya streamlines ECE education by providing a singular, adaptable platform that enables students to focus and deepen their understanding of core engineering principles without the distraction of moving between multiple tools.

Southern Methodist University (SMU)

Red Pitaya as a Lab Instrument

As a software-defined instrument, a Red Pitaya is the perfect companion to students' first steps in electrical engineering. At Southern Methodist University (SMU) in Dallas, Red Pitaya devices were used in a signal processing course.

Nominations & AWARDS

We are especially proud of winning the Academic Support Award at **The Electronic Industry Awards 2022!**

Six reasons to **BUY RED PITAYA**

Power of Open Source

Unlock endless customization with our fully open-source platform, encouraging user-driven innovation to meet any engineering need.

Integrated Toolset

Elevate efficiency with our sleek device, engineered to replace a multitude of bulky lab instruments, freeing up valuable workspace.

Top-Tier Processing

Experience the power of Xilinx Zynq SoC with our devices, blending an FPGA and ARM processor for unmatched real-time processing and flexibility.

Affordable Excellence

Enjoy advanced testing and prototyping without hidden fees or licenses. Our cost-efficient solution lowers financial barriers, enabling broader innovation.

Easy to Integrate

Red Pitaya replaces a vast range of test & measurement instruments & can be controlled by LabVIEW, MATLAB, Python or programmed to your own needs.

Accessible Remote Control

All Red Pitaya products are IoT devices that can perform remote and distributed measurements and provide real-time data.

Great minds in different segments **TRUST RED PITAYA PRODUCTS**

1. Industry

Companies in the automotive, aerospace, telecommunications and medical fields use Red Pitaya as a reliable OEM component for a variety of RF applications.

"Red Pitaya has been critical in transitioning our system from a proof-of-concept, laboratory instrument to a field-hardened industrial tool."

Robert Wright - Co-Founder and VP Engineering at LongPath Technologies

2. Academia

Red Pitaya helps professors teach more efficiently and effectively, and students learn with greater ease. Learning FPGA programming and the basics of electronics is now more intuitive and affordable than ever.

"We have been making extensive use of Red Pitaya, which has become an essential part of our activities as we conduct educational activities on radiation measurement targeted at middle and high school students. The range of research made possible by fast data collection is broad, and in this respect, Red Pitaya has become an important and easily accessible tool for middle and high school students."

Kazuo Tanaka - CEO at Accel Kitchen LLC, Associate Professor at Waseda University

3. Research

Red Pitaya is an essential component of many scientific research projects in the fields of physics, communication, materials and bioscience. Use Red Pitaya to speed up your experimental setup and get faster results.

"We are very happy with STEMLab 125-14's flexibility and ease of use. At Danish Technical University these boards have been instrumental in our DASQ-1 quantum computer project where we used them for stabilizing optical paths and photon arrival time tagging."

Axel Bogdan Bregnsbo - Research Engineer at Technical University of Denmark

4. Radio amateurs & makers

Red Pitaya provides a great price/performance solution to build your own SDR transceiver or other DIY projects.

"Thanks to Pavel Demin's free SDR Receiver App, the Red Pitaya can be used by both CW Skimmer Server and RTTY Skimmer Server to monitor about 180 kHz on each of EIGHT different radio bands, simultaneously. I'm not aware of any other SDR currently on the market that can do this so well at such a low cost."

Bob Wilson - N6TV
